ISO 9001

ISO 14001

HIGH PERFORMANCE VERTICAL MACHINING CENTER

Introducing AWEA with mature manufacturing abilities and advanced technology skills, the AF series. They are based on high rigidity structure and three axes high precision linear guide way design with fast arm type ATC and chip conveying system. It is to provide you with fast, strong, stable machining performance. AF series are broadly used in high precision machine parts manufacturers, which can easily meet your demands of today and tomorrow.

AF-1800
(X : 1,800 / Y : 800 / Z : 800)

AF-1060
(X : 1,060 / Y : 600 / Z : 600)

AF-860
(X : 860 / Y : 600 / Z : 600)

(Unit : mm)

High Performance Vertical Machining Center

Based on AWEA's innovative technology, the AF series is specialized on high precision parts and mold machining industry. It can fully present high precision and high efficiency machining ability with very reasonable cost.

- The modular spindle design provides cutting flexibility for various machining needs.

SOLUTION FOR PRECISION PARTS

Spindle	Taper	Speed Range
Belt-drive Spindle	BT40	8,000 ~ 10,000 rpm

SOLUTION FOR PRECISION MOLD

Spindle	Taper	Speed Range
Direct-drive Spindle	BT40 / BT50	8,000 ~ 15,000 rpm

SOLUTION FOR HEAVY CUTTING*1

Spindle	Taper	Speed Range
Gear Spindle	BT40 / BT50	8,000 / 6,000 rpm

*1 Please contact with your sales representative for applicable models.

AF Series 610 / 650 / 760 / 860 / 1000
1060 / 1250 / 1460 / 1400 / 1600 / 1800

High Performance Vertical Machining Center

Combining strong machining capability and superior quality, the AF series fulfills various machining requirements along with stable accuracy and long-lasting durability.

- X-axis travel 610 mm ~ 1,800 mm, Y / Z axes travel 450 mm ~ 800 mm.
The complete product series can fulfill major working needs.
- High precision linear guide way design is used on three axes to provide the optimum control and efficient movement. Also, base on the actual machining application, customers can either select roller type or ball type linear guide way.
- Highly efficiency 24T arm type magazine design provides fast and reliable tool change system.
- Rotary operation panel and large width of protection door provide convenient operation display and spacious space for loading and unloading parts.
- Independent coolant tank system provide ease of maintenance.
- High pressure coolant pump efficiently increase cooling capability.

AF

Series

610 / 650 / 760 / 860 / 1000
1060 / 1250 / 1460 / 1400 / 1600 / 1800

High Performance Vertical Machining Center

High Rigidity Structure

- The Finite Element Analysis (FEA) provides optimal machine design and light-weight structure advantage while ensuring high rigidity of machine.
- The MEEHANITE casting bed and Y-shaped column design provide solid support to ensure ultimate dynamic accuracy.
- Δ (Delta) Wide span column structure provides optimal machining rigidity. The headstock retains stability and accuracy even under high speed traveling.
- The contact surface of the column and bed are all hand scraped to ensure precision assembly, strong structure and loading balance.

- One-piece ball screw driving motor support and bearing support enable cutting force to spread evenly into casting body, so it efficiently enhances axial system of entire rigidity and prevents deformation of ball screw.
- Contact surfaces between nut and support are hand scraped to ensure perfect contact.

AF

Series

610 / 650 / 760 / 860 / 1000

1060 / 1250 / 1460 / 1400 / 1600 / 1800

High Performance Vertical Machining Center

(Casting structure of AF-1600 w/ direct-drive spindle model shown)

■ X-axis travel 1,400 mm ~ 1,800 mm model, the bed uses four linear guide ways design, and size of the bed will extend proportionally according to travel length in order to solve the overhang problem of working table and ensure the optimum support rigidity.

■ High rigidity roller type linear guide way which combines heavy cutting ability from ground box way and fast movement with low abrasion ability from linear guide way completely improves rigidity and control of machine.

■ High precision dual-nuts ball screw provides excellent heavy cutting rigidity while ensuring machining accuracy and extend durability of ball screw.

■ Three axial system are adopted with FANUC αi absolute AC servo motor direct drive to provide great thrust and fast acceleration / deceleration movement. Plus, it efficiently decreases motor load and reduces generation of heat while maintaining the ultimate performance and accuracy.

High Performance Spindle System

High Efficiency Belt-drive Spindle

- The high efficiency belt-drive spindle provides 8,000 rpm or 10,000 rpm spindle speed which depends on machining requirements.
- The spindle is equipped with FANUC $\alpha 8i$ motor which provides maximum output of 11 kW.
- All series are standard with spindle oil cooler system to prevent thermal expansion effects and thermal deformation.
- The contact surfaces between headstock and spindle are all precisely hand scraped to ensure optimal performance and precision.

High Torque Gear Spindle

- 2-speed super heavy-duty gear box.*1
- Floating type hydraulic tool release device eliminates pressure on the spindle bearing when releasing a tool.
- 8,000 rpm high torque spindle (BT40) is equipped with powerful 11 kW motor delivers maximum torque output of 280 N-m at 375 rpm to meet various working conditions.
- 6,000 rpm high torque spindle (BT50) is equipped with powerful 15 kW motor delivers maximum torque output of 382 N-m at 375 rpm.

*1 Gear spindle are all equipped with box way Z-axis.

▶ FANUC $\alpha 12i/ \alpha 15i$ motor are available.

▶ FANUC $\alpha 15i/ \alpha 18i$ motor are available.

High Performance Spindle System

High Speed, High Power Direct-drive Spindle

- Direct-drive spindle efficiently separates the heat generated from the motor, which reduces deformation, therefore increasing machining accuracy.
- Floating type hydraulic tool release device eliminates pressure on the spindle bearing when releasing a tool.
- Several options of spindle heads and speed are available to fulfill various high speed machining requirements.

- Direct-drive spindle provides ability of precise contour machining to fulfill requirements of mold industry and high accuracy requirement components.

▶ FANUC $\alpha 12i$ motor is also available.

▶ FANUC $\alpha 12i / \alpha 15i$ motor are available.

▶ FANUC $\alpha 15i$ motor is also available.

▶ FANUC $\alpha 15i$ motor is also available.

▶ FANUC $\alpha 15i$ motor is also available.

High Speed ATC System

- All series are standard with 24T arm type ATC system which can easily fulfill various types of processing needs.
- Standard shortcut tool change function can shorten tool change time and increase working efficiency.
- The tool magazine is supported by the column base, which increases stability and lowers the tool change vibration, while ensuring its precision (AF-1250 ~ AF-1800).

24T Disc type tool magazine

Chip Disposal System

- All series are equipped with chip auger. Single or triple chip augers are adopted according to different models.
- The optional high pressure chips flush coolant system is also available.

■ Single chip auger x 1

■ Single chip augers x 3

■ Chain Type Chip Conveyor (Opt.)

Optional Compound Guide Ways

Fulfilling Your High Speed And Heavy Cutting Needs

- Z-axis could adopt with heat treated box way structure with gear box spindle. Very suitable for heavy cutting requirements.
- Three axes compound structure design provide both benefits of heavy cutting capacity on Z-axis box way plus fast moving high accuracy features of linear guide ways on X and Y axes.

Optional APC System

Fulfilling Your Mass Production Needs

The high-quality, world famous Japanese auto parts machining plants, is recently installed with AWEA AF-860APC for processing of automotive intake manifold, gear box shell and other key components. Because of the AWEA machine high quality and high reliability performance, the installation quantity is continued to grow up.
